

HiltonBecker MD Lactic Acid Gel 10%

As we get older, it becomes increasingly difficult for our skin to shed cells. This makes it important to use an effective exfoliator in order to assist and maintain a healthy skin cycle. Removing the layer of harder skin on the surface reveals a more radiant and youthful complexion below.

Dr. Becker's Lactic Acid Gel 10% works not only to exfoliate the skin, but helps to unclog skin pores, soften the skin and encourage collagen health.

Lactic Acid is an effective alpha-hydroxy acid that's very good at exfoliating and softening the epidermis. It produces an excellent balance in exfoliating the skin without causing irritation.

benefits

- Helps clear skin pores
- Exfoliates epidermal skin cells
- Refreshes and renews the surface of the skin
- Helps soften skin

daily application

Evening or as often as tolerated

ingredients

Purified Water (Aqua), Lactic Acid, Xanthan Gum.

directions

Dispense a small amount of Lactic Acid Gel to your fingertips and smooth over entire face and neck. Leave on for 1 to 3 minutes, depending on tolerance. Rinse with cool water to neutralize. Follow with a Moisturizer to replenish moisture. Repeat as needed. Recommended for use on dry or sensitive skin.

how it works

Lactic Acid, also known as milk acid, is a powerful alpha-hydroxy acid. It is often used as an exfoliating agent isolated and obtained via glucose, fructose and sucrose from various fruit and botanical sources.

Lactic Acid deeply penetrates pores, removing any existing dirt, while simultaneously washing away dead skin cells. Its natural affinity to the skin makes it very effective at softening the surface.

Dr. Becker's Lactic Acid Gel 10% delivers all these wonderful benefits to you in a convenient and soft gel.

It has some skin hydrating properties, and heavenly smooth texture. This ensures that not only will any exfoliation treatments from Dr. Becker's Lactic Acid Gel 10% be effective, but comfortable and soothing as well.
