

HiltonBecker MD Salicylic Acid

There's something to be said about a fresh start. Clean, rejuvenated, clear and purified skin is an invigorating way to begin the day. That's essentially what exfoliation is all about. Out with old cells, in with the new; a clear canvas on which to display radiant beauty and youthful good looks.

Dr. Becker's Salicylic Acid Exfoliator 2% offers a liberating exfoliation experience in a novel and convenient formula.

Thanks to the deep pore cleansing and superficial peeling properties of Salicylic Acid, this hard working exfoliating agent is a tried and tested solution to both problematic skin types and everyday skin rejuvenation.

benefits

- Clears clogged pores
- Exfoliates epidermal skin cells
- Refreshes and renews the surface of the skin
- Helps tighten and improve skin texture
- Assists in the reduction in the appearance of fine lines and wrinkles

daily application

Evening.

ingredients

Purified Water (Aqua), Alcohol Denat, Salicylic Acid.

directions

Use after cleansing, as often as tolerated. Saturate gauze pad with Dr. Becker's Salicylic Acid Exfoliator 2%, and gently buff skin. Rinse with cool water to neutralize. Follow with a moisturizer to replenish moisture.

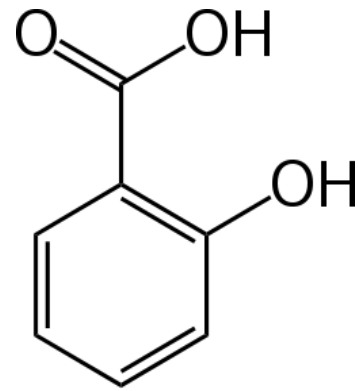

Recommended for use on oily or problematic skin.

how it works

Salicylic Acid is a beta hydroxy acid, as such it is a very effective chemical peeling agent. With a 2% mixture, it creates an excellent balance in efficiently exfoliating the skin without any tissue damage or harmful burn.

Nowadays Salicylic Acid is synthetically produced under various scientific processes, but it was initially obtained from the bark of the willow tree and various wintergreen leaves. Its medicinal value has been well documented since ancient times.

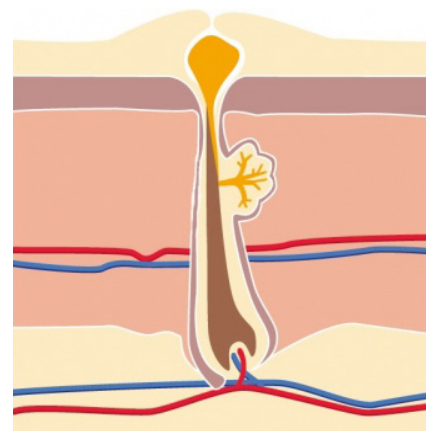

For exfoliation purposes, it helps the dead epidermal skin cells to shed, exposing new, more vibrant and healthy cells below. It also penetrates deep into clogged pores to remove dirt. This makes it one of the preferred ingredients for tackling problematic skin.

Salicylic Acid is a beta hydroxy acid and remarkable exfoliation agent

Salicylic Acid was originally obtained from Willow bark and various wintergreen leaves. Nowadays it is produced synthetically, but with the same cleansing and exfoliation properties

Salicylic Acid unclogs pores and constricts their diameter, a great solution for problematic skin
